Front-end Engineering Assignment

Assignment Deliverables

1. A minimum viable product
2. Push it on git/bitbucket and attach its link and your resume in the mail to summer@innovaccer.com with **HackerCamp Summer 2018 Submission - Frontend** as its subject.
3. **Bonus points:** Design creativity
4. **Bonus points:** Data storage in SQL/NoSQL database and API interaction
5. **Bonus points:** Daily and monthly expense report by category in graph-wise visualization

Problem Statement

You have to create your personal expense manager web app to keep track of your daily expense across different categories like Grocery, Entertainment, Vehicle, Food, miscellaneous.

Following are the requirements for a Minimum Viable Product.

- Add expense by category
- List all your expenses
- Track your daily expense by category - Grocery, Entertainment, Vehicle, Food, miscellaneous

You can store data locally in browser's local storage or IndexedDB.
Bonus points for:

- Design creativity
- Data storage in SQL/NoSQL database and API interaction
- Show daily, monthly expense report by category in graph visualization

Additional Questions
If you have questions related to the assignment deliverables, please drop me an email on krishna.kumar@innovaccer.com and I will try to get back to you as soon as it allows.
Cheers, and good luck :)
